

# Integra<sup>®</sup> MicroFrance<sup>®</sup>

## Parsons Laryngeal Sprinkler

Developed in conjunction with David S. Parsons, MD, FAAP, FACS

Laryngeal spasm is a potential concern whenever the larynx is evaluated without an endotracheal tube. Most otolaryngologists apply an anti-spasmodic agent (such as 1% lidocaine) to the glottic structures.

The Parsons Laryngeal Sprinkler helps gently apply the topical medication to the supraglottis, glottis and subglottis in a uniform, low-dose manner.

- Large tube diameter (1.5 mm) helps ensure uniform medication spray in all directions from supraglottis to subglottis
- Bent cannula shaft allows placement between true vocal cords without obstructing visualization
- Cannula length (230 mm) accommodates most standard adult laryngoscopes and most pediatric patients (for spontaneous ventilation anesthetic technique)
- Luer end fits most standard syringes
